

UNITED STATES GOVERNMENT

Memorandum

TO : C/SMS

DATE: 4 December 1964

FROM : DAD/S&D

SUBJECT:

25X1D The memorandum draft looks good. I have made some notations in blue. I think that we have ignored the practical problem of citing so that the can be intercepted. We sort of suggested this might be possible; is it really feasible?

You might want to write down each of the OSI desires in a chart form and then right beside it to indicate, in another column, the probability of doing each. In other words, a short synopsis of all the work.
